Lift Maintenance, Repairs, Refurbishment, Modernisation and New Installation
Our company is built around maintenance contracts which include the following clients:

- Interserve PLC
- Cumberland Infirmary
- Burnley General Hospital
- Eddisons LLP
- Calico Housing
- Carlisle City Council
- HSBC
- Jones Lang LaSelle
- CBRE
- Storefirst
- Warwick Estates
- Park Inn Hotels

Our sector base includes: hotels, apartments, public buildings, offices and the retail industry.
Having experience of the lift industry before 'package lifts' came along, we know how well engineered and long lasting our lifts are and using that ethos and experience, started to design our own lifts.

Not long after that decision, we were approached by Storefirst Ltd who required some 2000 kgs goods passenger lifts for the storage market, we have since installed multiple lifts for them at the following sites:

- Rochdale
- Barnsley
- Burnley
- Blackburn
- Ellesmere Port
- Glasgow
- Leeds
- Wakefield
- Trafford
- Preston
- Rushden
- Derby
- Nottingham
All these projects, which involved fabricating the structural lift shaft along with the lift car, were manufactured within 3 miles of our workshop.

This will continue for all future projects going forward. We have now designed and installed the following types of lifts:

- Goods Only Hydraulic 2000 kgs
- Goods Only without a pit Hydraulic 2000 kgs
- Goods Passenger Hydraulic 2000 kgs
- Goods Passenger Traction MRL 2000 kgs
- Passenger Traction MRL 630 kgs
- Passenger Traction 225 kgs

“I truly could not be happier with all my dealings with the whole team at arc elevators”

David Lamkin

We offer fully customised lifts and provide a turnkey solution for both architect and developer. With an almost limitless selection of finishes, colours and combinations of lighting, we can supply a bespoke design to compliment your existing building.
All our lift installations use the latest technology, including our own R&D designed wireless GSM auto-diallers. Gearless machines are used on our traction MRL lifts to ensure both ride quality levels and utility savings.

We are confident in our product and offer a 2 year full parts and labour warranty with a full maintenance package and use of our 24/7 on-call engineers.

Our lifts can be installed in a standard shaft or can be designed specifically for a bespoke solution.

We keep continuity with suppliers by using the same control panels and door operators for modernisation projects and ensure spare parts are readily available in our stores.

Arc Elevators are an extremely driven and motivated company, restoring, manufacturing and ensuring well engineered, long lasting products for our clients.
Britannia Premier Removals and Storage approached Arc Elevators because they were struggling to find a company that would design a goods only lift around the logistics of their business.

They required a lift that would move furniture. So we designed a structure and hydraulic lift with an internal floor space of 1500mm x 2900mm.

The car and structure were both designed by our own design team and the fabrication carried out by a local company.

This project was completed in 2014 and the co-operative group linked to the company has since placed multiple orders with us.
**TRAINING**

At Arc, we maintain a pro-active approach to staff training, ensuring highly skilled, motivated and responsive employees provide the best in services and standards.

As part of the company’s quality growth initiative, field engineer staff are continuously trained and updated on the latest technical and legislative developments, while all staff are trained and actively encouraged to perfect their relevant skills.

**GREEN SOLUTIONS**

For most business owners, going green is a major consideration when upgrading or replacing lift equipment.

We supply energy-saving, regenerative, variable-speed drives that are environmentally friendly. Manufacturers have recognised the need to address environmental concerns and this has resulted in passenger and goods lifts that are more energy efficient.

There are a variety of energy-saving options available to reduce power consumption of the drive system. Savings of up to 30% of the running power are achievable with a range of standby power and hibernation settings to save up to 95% during periods of inactivity.
